ABSTRACT

Methods for treating a patient using time varying magnetic
field are described. The treatment methods combine various
approaches for aesthetic treatment. The methods are focused
on enhancing a visual appearance of the patient. In one
embodiment, the method is performed by switching on a
device which includes a connection to an energy source, an
energy storage device, a switching device and a magnetic
field generating device including a core, and applying a
time-varying field with a maximal value of magnetic flux
density derivative of at least 300 T/s to a muscle of the
patient. The diameter of the core is up to 80% of an outer
diameter of the magnetic field generating device.
